

AI Security Proxy — Test Document

This is a digital PDF file for testing PyMuPDF extraction.

It contains selectable, machine-readable text.

The extractor should detect this as a digital PDF and use PyMuPDF.

Section 1: Introduction

The AI-Proxy project is a multi-layer LLM security proxy.

It protects against prompt injection, PII leakage, and more.

Section 2: Pipeline

Input filters: Unicode Firewall, spaCy Rules, BERT, PII, Context.

Output filters: spaCy Rules, PII Detector, Context Relevance.

Section 3: Document Processing

FileGate validates uploaded files before extraction.

Smart router chooses the best extraction method per file type.

Text is chunked into 250-word overlapping segments.
